

5.2.2 Technical Architecture

Conversion to GUIDs and removal of reliance on ODBC drivers

Converting from English to Metric units

Formalized API/SDK for custom development

Conversion to GUIDs

- Virtually all tables have GUID primary key
 - Not attributes
 - Globally unique
 - Support replication (field inspection)
 - Standard naming convention
 - Single primary key / foreign key joins
 - Multi-part key joins largely removed
- Views will be created that will provide a more seamless transition for existing feeds and reports. Legacy columns (e.g. BRKEY) will remain temporarily for a smoother transition

Conversion to GUIDs

- INSPEVNT (simple) example

- Before

- 🔑 BRKEY (PK, FK, varchar(15), not null)

- 🔑 INSPKEY (PK, varchar(4), not null)

- After

- 🔑 INSPEVNT_GD (PK, varchar(32), not null)

- 📄 INSPEVNT_LB (varchar(50), null)

- 🔑 BRIDGE_GD (FK, varchar(32), not null)

Conversion to GUIDs

- PON_ELEM_INSP (complex) example
 - Before (parents/grandparents requiring complex join)
 - 🔑 BRKEY (PK, FK, varchar(15), not null)
 - 🔑 INSPKEY (PK, FK, varchar(4), not null)
 - 🔑 ELEM_KEY (PK, FK, numeric(4,0), not null)
 - 🔑 ELEM_PARENT_KEY (PK, numeric(4,0), not null)
 - 🔑 ENVKEY (PK, FK, numeric(1,0), not null)
 - 🔑 STRUNITKEY (PK, numeric(4,0), not null)
 - 🔑 ELEM_GRANDPARENT_KEY (PK, numeric(4,0), not null)
 - After (parents/grandparents requiring one column to join)
 - 🔑 PON_ELEM_INSP_GD (PK, varchar(32), not null)
 - 📄 PON_ELEM_INSP_LB (varchar(50), null)
 - 🔑 PON_ELEM_DEFS_GD (FK, varchar(32), not null)
 - 🔑 ENVTDEFS_GD (FK, varchar(32), not null)
 - 🔑 BRIDGE_GD (FK, varchar(32), not null)
 - 🔑 INSPEVNT_GD (FK, varchar(32), not null)
 - 🔑 STRUCTURE_UNIT_GD (FK, varchar(32), not null)
 - 📄 PARENT_PON_ELEM_INSP_GD (varchar(32), null)

Impact of GUIDs on your agency

- If your agency is using BrM 'out of the box'
 - **NO** impact

Impact of GUIDs on your agency

- If your agency contains custom forms/reports
 - Going Forward
 - Reports and custom forms will be easier to create when joining tables
 - Naming conventions will remain standardized going forward (easier to map and use)
 - Simplified architecture
 - Immediate impact
 - Existing columns will remain to allow a smooth/temporary transition
 - Forms will eventually need to utilize GUIDs
 - Reports will eventually need to utilize GUIDs

Conversion to English

- All tables in BrM currently store units in Metric units of measure
 - Following NBI coding guide expectations (e.g. XXX.X for vertical clearance)
- All tables registered in DATADICT will have their units automatically converted to English
 - Expected values stored in the database will allow for additional accuracy, as necessary to ensure NBI standards are still met. (e.g. XXXX.X for vertical clearance)

Impact of unit conversion on your agency

- If your agency is using BrM 'out of the box'
 - **NO** impact
- If your agency contains custom forms/reports
 - Immediate impact
 - All **coded** forms will need to be converted to utilize the data being stored in English
 - All reports will need to be converted to utilize the data being stored in English

Formalized API/SDK

- A formal API and development document will be sent with 5.2.2.
- The API/SDK document will give details and a walkthrough on creating custom forms, user controls, as well as accessing non BrM tables.
- The API will give agencies a more ‘future-proof’ stable, direct way to access BrM data, without having to make direct database calls.
 - Example: Custom forms that are affected by the current by the GUID changes and Metric/English changes would have been handled by the API supported calls, and would require little to no agency tweaks.

Formalized API/SDK

- **ALL** tables within your database will be accessible, even non-BrM standard tables.
- BrM standard inspection forms will be able to be modified.
 - Add agency controls
 - Add custom modules

Technical Architecture – What does this actually mean?

- Standardize table structures and relationships.
- Satisfy long standing user request to convert to English Units.
- Custom development document will be created.
- **Significant** speed improvements (still not where we want to be)

Florida_MENNIS2 (.23)	OLD(Admin)	Oracle	4.75
Florida_MENNIS2 (.23)	OLD(Non-Admin)	Oracle	13.42
Florida_MENNIS2 (.23)	NEW	Oracle	1.97

Project Planning and Program Module

AASHTOWare Bridge Management

www.AASHTOWareBridge.com

Overview

- The focus of the Project Planning Module is the creation and management of projects.
- Requirements are based on:
 - 5.2 Detail Design Document
 - Project TRT Feedback
 - Task Force Use Cases and Direction

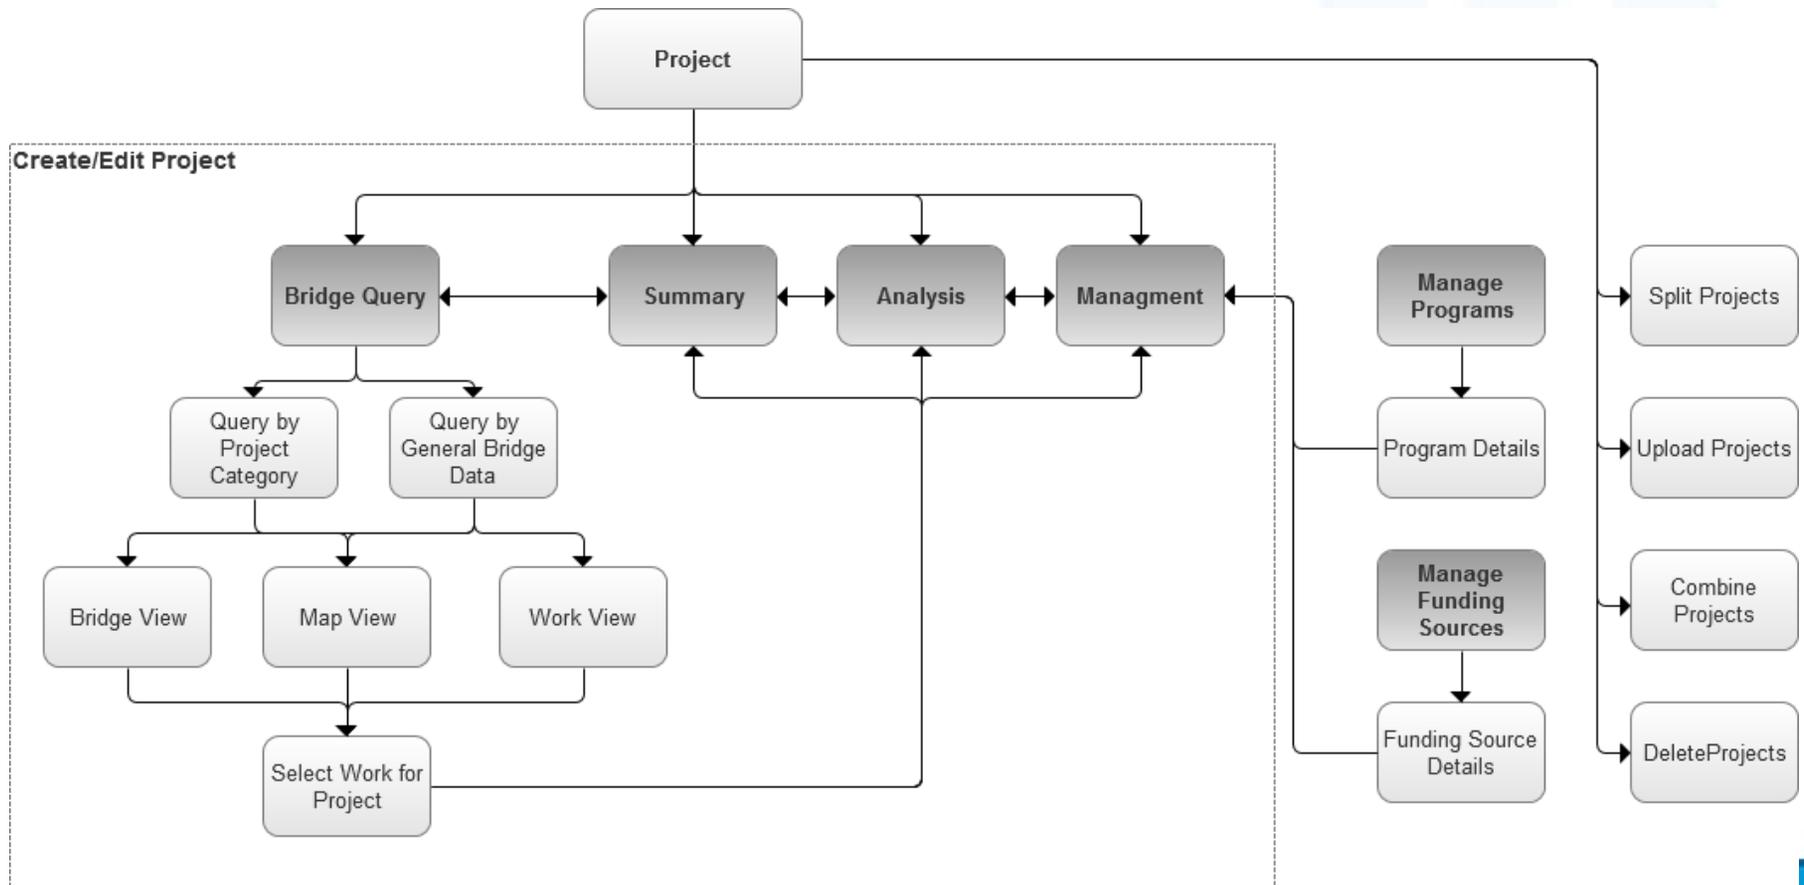

Use Cases

1. Creating a Project from a Single Bridge.
2. Creating a Project Including Multiple Hand-selected Bridges.
3. Creating a Project from a Bridge Analysis Group
4. System Generated Projects (Query).
5. Projects Developed Outside the Bridge Management Software.
6. Editing a Defined Project.
7. Changing the Status of a Project.
8. Deleting a Project.
9. Splitting a project into two projects.
10. Combining multiple projects into a single project

Overall Workflow

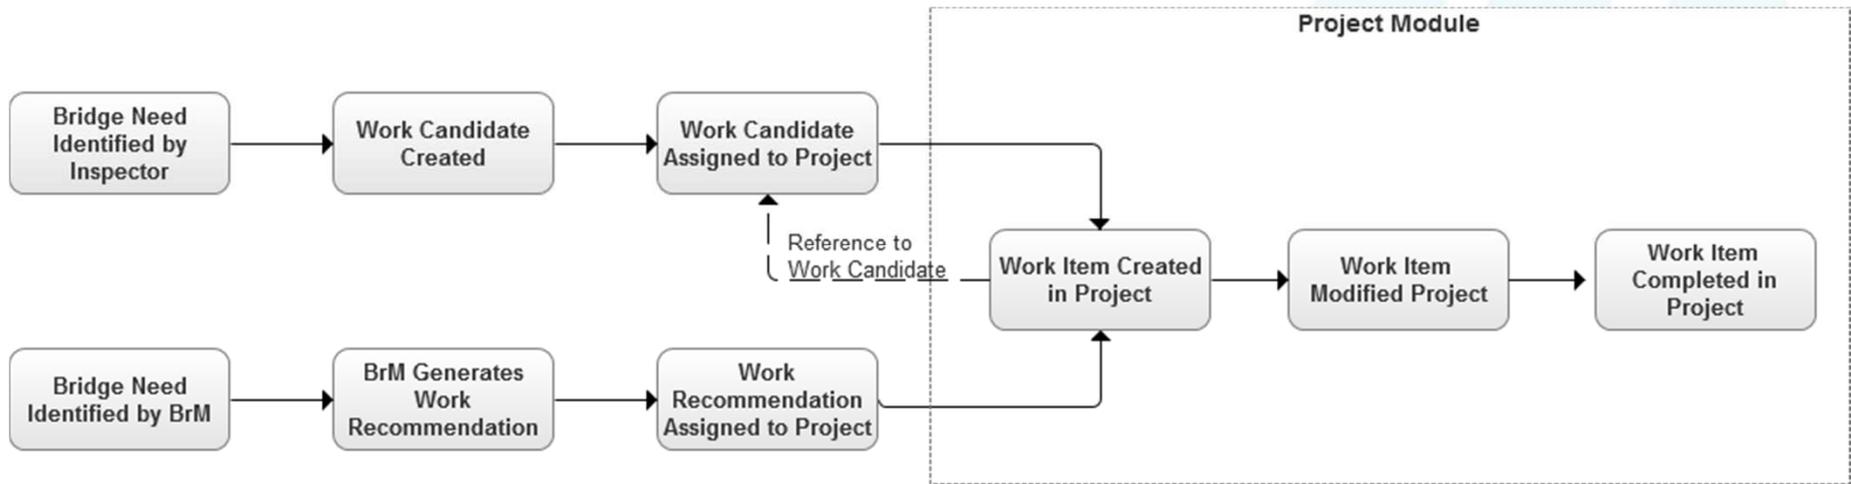

Terminology

- Work Candidates – Work that is identified by an Inspector during the inspection process to address specific bridge needs.
- Work Recommendations – System generated work that is identified based on the Element condition ratings collected during an inspection.
- Work Item – A copy of a Work Candidate or Work Recommendation that has been added to a project.

Work Item Flow

 Total Program Costs (Approved): \$6,250,000

Target Year Projects:

	Project Name	Project ID	Category	Cost (\$k)	Utility Change	Benefit / Cost (\$k)	Cost (\$k) /Benefit	Year	Project Status
X	1-25 Bridges Paving	1234-2234 -21	Paving	\$1,500,000	60	.025	4.23	2015	Planned
X	County X Bridge Paving	2235-5234 -19	Paving	\$250,000	55	.08	2.65	2015	Programmed

Total Project Costs (All Requests): \$1,750,000

Total Costs (All Requests): \$10,500,000
 Total Costs (Approved): \$8,000,000

Ready http://localhost:9000/default.aspx Port: 9000

Other Use Cases

AASHTOWare Bridge Management

www.AASHTOWareBridge.com

Upload Project

The screenshot displays the AASHTOWare Bridge Management 5 Cassini Browser interface. The window title is "AASHTOWare Bridge Management 5 Cassini Browser". The top navigation bar includes "File", "Sites", and "Help". The main header features the "BrM Bridge Management" logo and a user status area showing "Welcome: Pontis User", "Database: BrM521 SQL Server", and "Sample DB". Below the header is a menu bar with "Bridges", "Reports", "Admin", "Inspection", "Gateway", "Analysis", and "Projects". A left sidebar menu lists various functions: "Project List", "Manage Layouts", "Manage Filters", "Create / Edit Project", "Upload Project", "Combine Projects", "Split Project", "Manage Programs", and "Manage Funding". The "Upload Project" form is the central focus, containing the following elements:

- Import File Type:** A dropdown menu set to "BrM External Project File (XML)".
- Input File:** A text input field with a "Select" button to the right.
- Options:** A section with two radio buttons and associated fields:
 - Update Existing Project: Includes a "Select Project" dropdown menu.
 - Add as New Project: Includes a "Project Name:" text input field.
- Buttons:** "Import" and "Cancel" buttons at the bottom of the form.

The status bar at the bottom of the window reads: "Ready http://localhost:9000/default.aspx Port: 9000".

Combine Projects

The screenshot displays the AASHTOWare Bridge Management 5 Cassini Browser interface. The main window title is "AASHTOWare Bridge Management 5 Cassini Browser". The top navigation bar includes "File", "Sites", and "Help". The user is logged in as "Pontis User" and the database is "BrMS21 SQL Server Sample DB". The "Projects" menu item is selected, and the "Combine Projects" dialog box is open.

The "Combine Projects" dialog box contains a table of "Selected Projects":

Project Name	Project ID	Category	Status
Rehab 1-25 Bridges	1234-2234 -21	Rehabilitation	Approved
County Bridge Painting	2235-5234 -19	Paint	Under Review
Clark St. Bridge Replace	3234-2234 -55	Replacement	Proposed

Below the table, there is a text input field for "Combined Project Name:" and two buttons: "Combine" and "Cancel".

At the bottom of the browser window, the status bar shows: "Ready http://localhost:9000/default.aspx Port: 9000".

Deterioration Modeling

AASHTOWare Bridge Management

www.AASHTOWareBridge.com

Historical Background

- Pontis 4.x Deterioration Modeling:
 - Markovian models
 - Interaction of elements not modeled
 - Probability transition matrices

Markovian Model

- Condition-based model.
- No age is considered.
- **Unrealistic results**: faster deterioration rates.

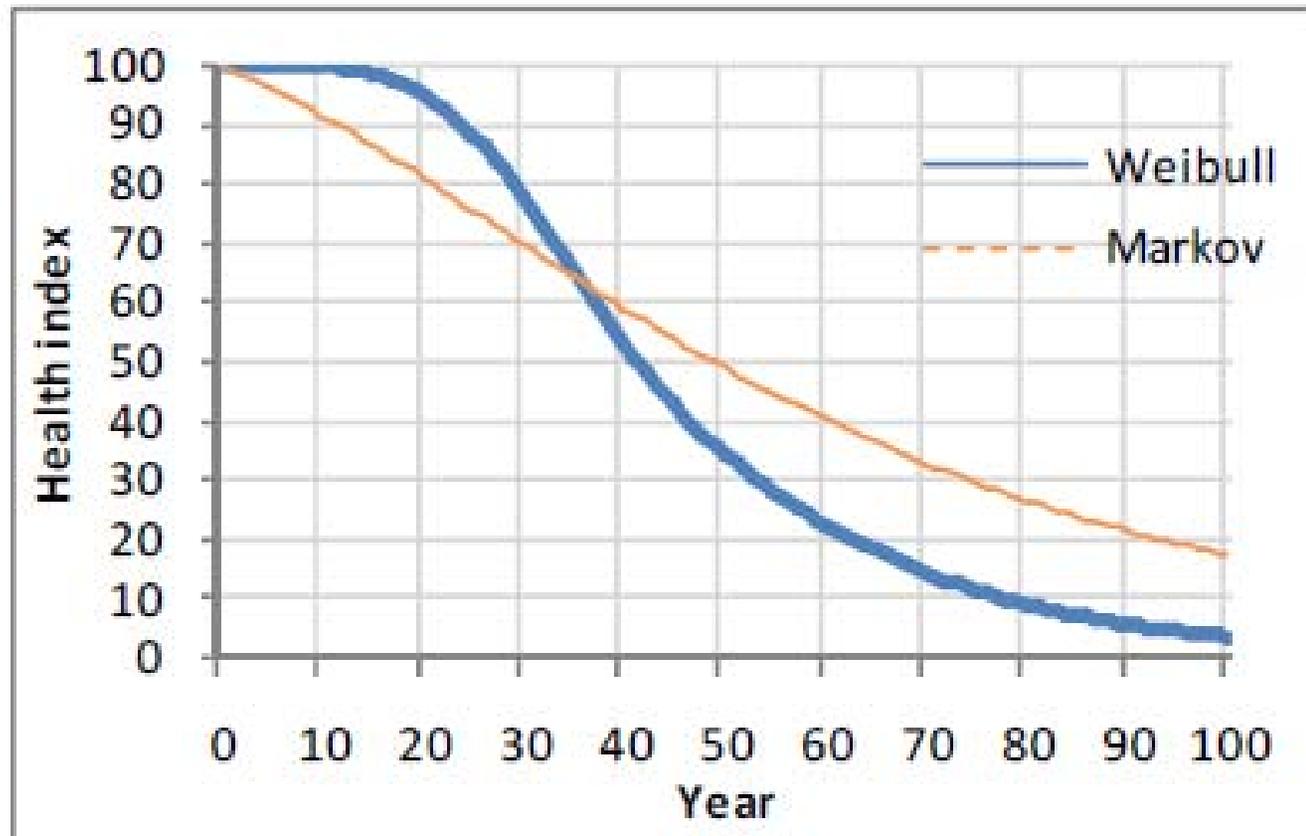

Weibull Model

- Age-based model.
- Estimates element age from its conditions
- Used to model the **onset of deterioration**:
CS1 to CS2
- Realistic results.

Markovian vs. Weibull

BrM Deterioration Model

- Combination of Weibull with Markovian
- Considers the effect of other factors:
 - Protecting systems (paint, cathodic protection).
 - Environment.
 - Agency(e.g. traffic volume).

Protection systems

- Designed to slow element deterioration.
- An element may contain several protection systems:
 - 510 - Wearing Surfaces
 - 515 - Steel Protective Coating
 - 520 - Deck/Slab Prot Sys
 - 521 - Conc Prot Coating

Factors

- $f = f^E f^F \prod_e f_e^M$
- f^E - Environment factor
- f^F - Formula factor
- f_e^M - Protection factor of element e

- $T_i = f * T_i$

Transition times

- Transition times: T_1 T_2 T_3 (expert elicitation)
- T_i – Median number of years it takes a unit of element to transit to the next condition state.
- Estimated for typical elements:
 - Moderate environment.
 - No protection

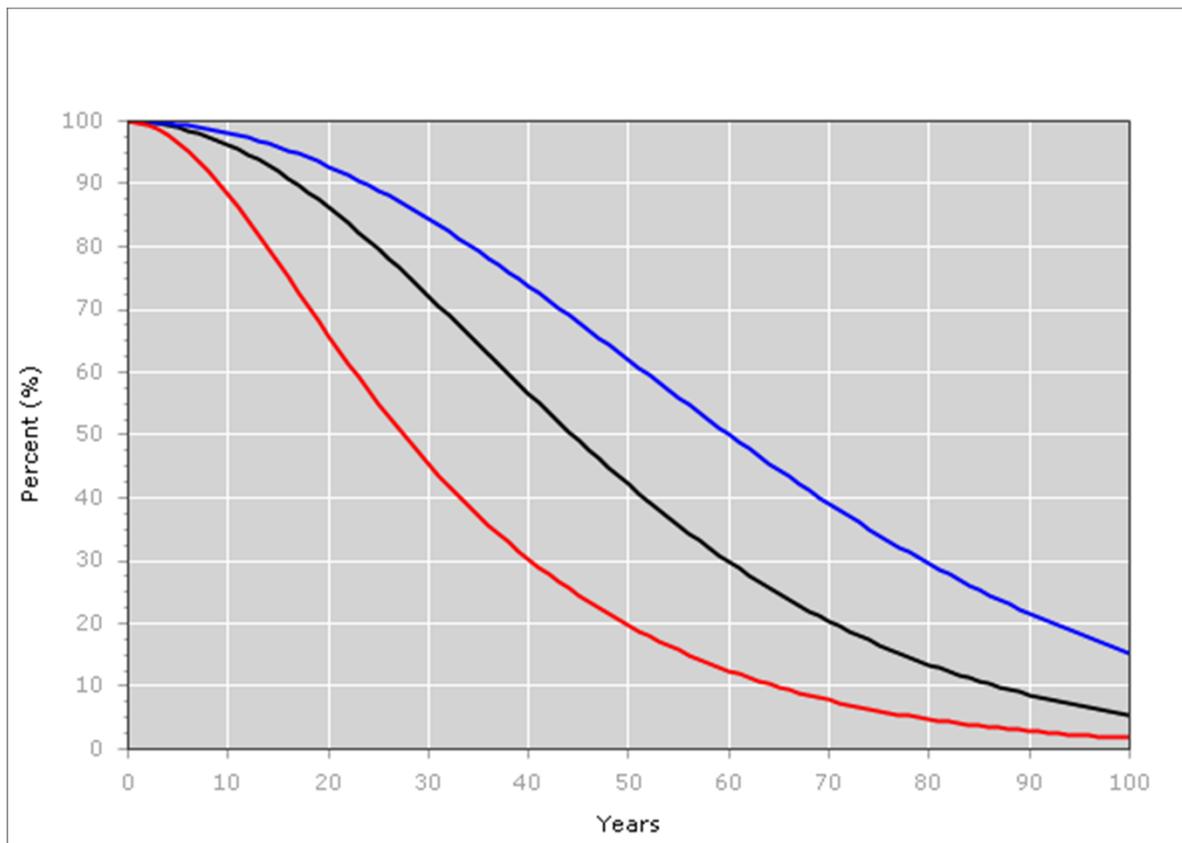

Examples

AASHTOWare Bridge Management

www.AASHTOWareBridge.com

Tweaking Median Years in CS1

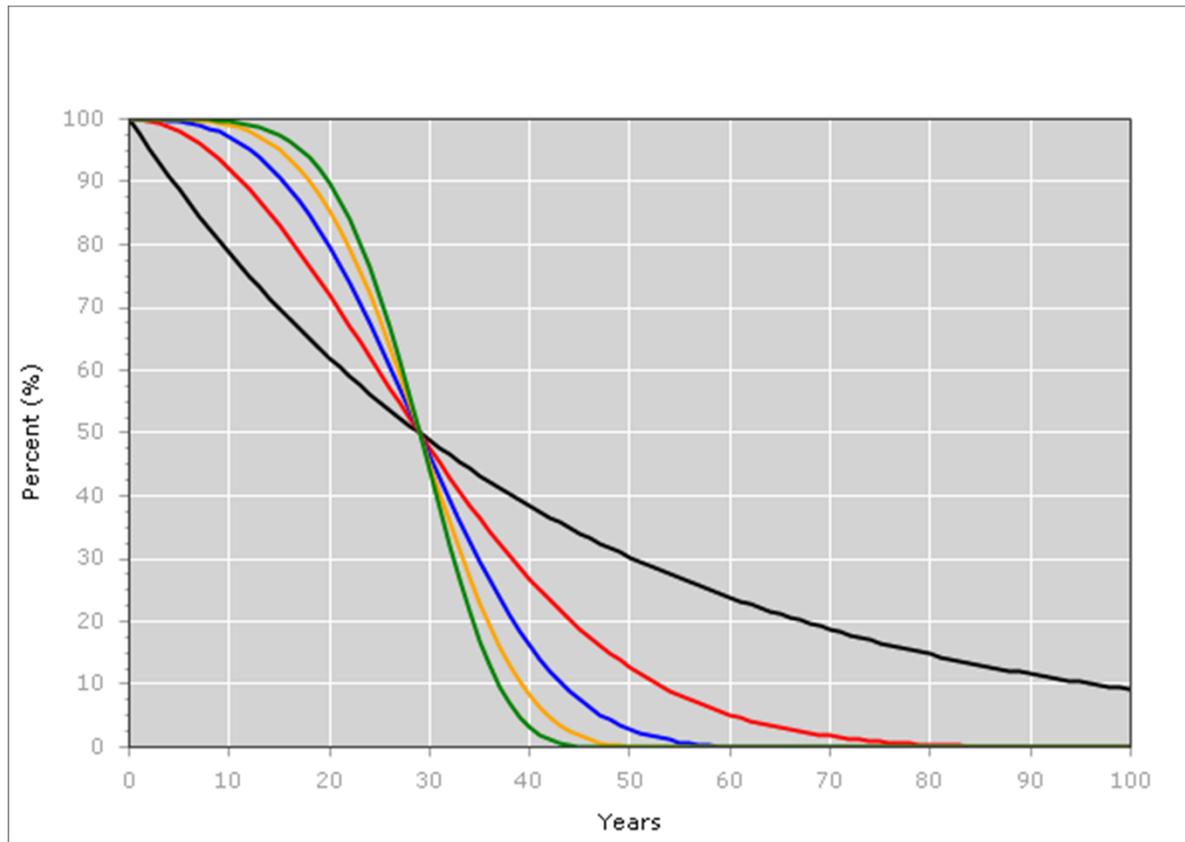

330 – Metal Bridge Rail

T1: 29 years (default)

T1: 15 years (-50%)

T1: 44 years (+50%)

Tweaking Weibull Shaping Parameter

330 – Metal Bridge Rail

$\beta: 1$

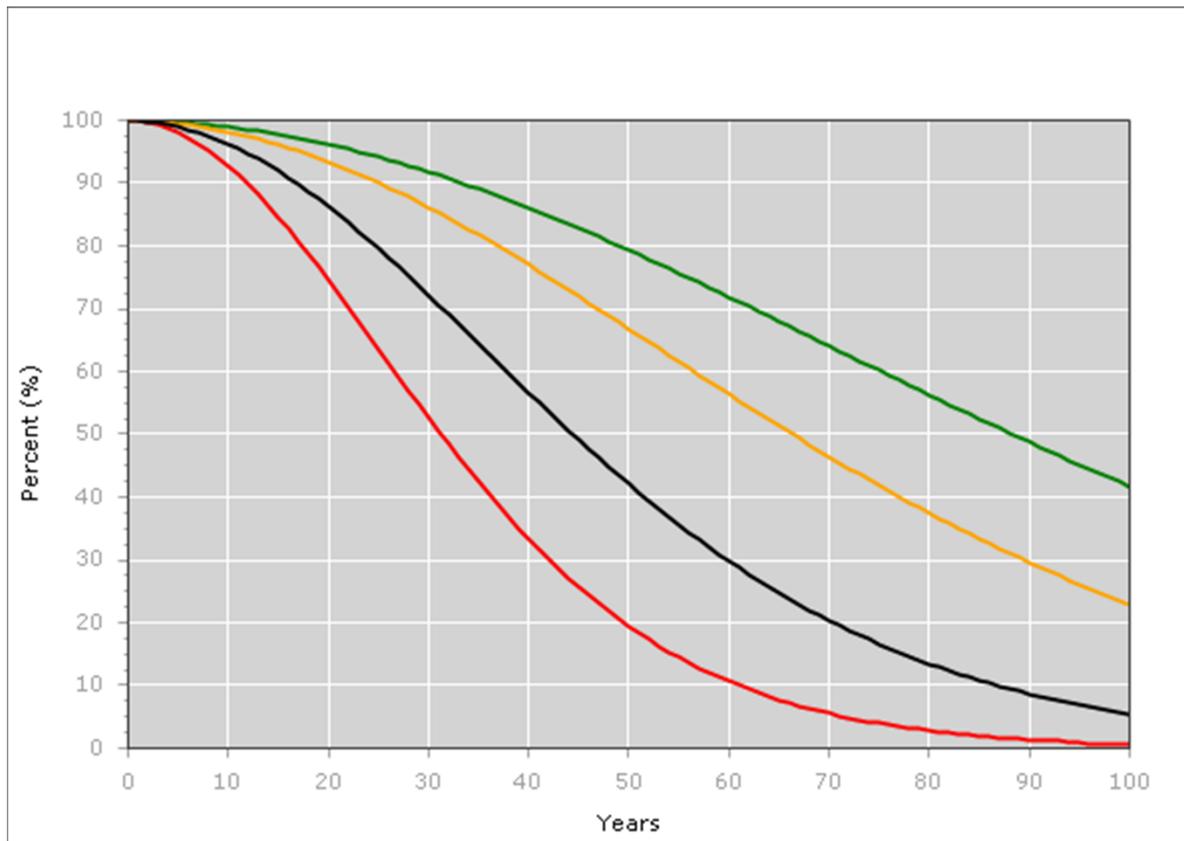

$\beta: 2$ (default 1.8)

$\beta: 3$

$\beta: 4$

$\beta: 5$

Environment Factors

330 – Metal Bridge Rail

Ben(1): 2.0

Low(2): 1.5

Mod(3): 1.0

Sev(4): 0.7

New Inspection Scheduling Module

- Overview
 - Worked with TRT to determine ultimate needs of the user community
 - Targeted a simple result that would still meet all requirements
 - Maintain as much existing process and logic as possible
 - Largest change: **Most recent inspection report is always an agency's reference point**

New Inspection Schedule Module

- Existing entry screen
- New entry screen

Specific Changes

- Most recent inspection report is always used when creating a new inspection report
- Most recent inspection report data is always sent on the NBI tape
- Remove concept of 'previous date'. All NBI inspection dates are what will be submitted on NBI tape
- Removal of INSPKEY (reference GUID change)
- Additional tracking information related to the inspection (Engineer of Record, Entered By, Date Entered)
- Added 'schedule notes'. Individual notes related to this specific inspection, not carried forward.
